Anti-Glare

Shinetoos full-cut off LED tennis court light is an asymmetric indirect lighting design that can minimize the glare rate and project the illuminating light to the ground through downward reflection, thereby protecting players and the audience from glare.

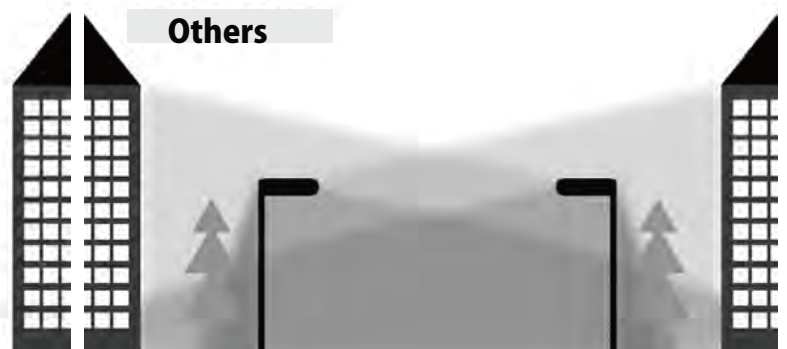

Glare is a very annoying factor for tennis courts, but many tennis court lighting suppliers ignore it or lack solutions. Anti-glare tennis lights are very important to properly illuminate the tennis court.

Spill Light Control

Spill light refers to the light falling outside the object to be illuminated, it is a kind of light pollution.

When using outdoor tennis court lighting, the court area needs to be bright enough, not spilling back off of the court. Shinetoo's tennis court lights have a spill-proof light control function, which helps to illuminate the playing surfaces correctly.
