Anti-Glare

Shinetoo's full-cut off LED tennis court light is an asymmetric indirect anti-glare lighting design that can minimize the glare rate and project the illuminating light to the ground through downward reflection, thereby protecting players and the audience from glare.

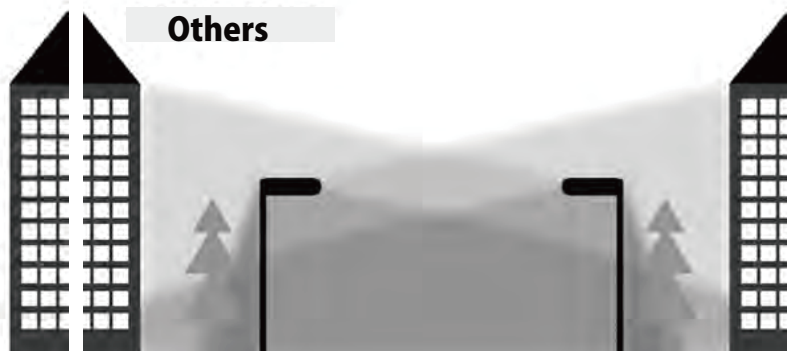

Glare is a very annoying factor for tennis courts, but many tennis court lighting suppliers ignore it or lack solutions. Anti-glare tennis lights are very important to properly illuminate the tennis court.

Spill Light Control

Spill light refers to the light falling outside the object to be illuminated, it is a kind of light pollution.

When using outdoor tennis court lighting, the court area needs to be bright enough, not spilling back off of the court. Shinetoo's tennis court lights have a spill-proof light control function, which helps to illuminate the playing surfaces correctly.
